WE ARE PASSIONATE ABOUT PRODUCTION

4 May 2015
MODERN INDUSTRIAL MANUFACTURING RE-DEFINES THE MEANING OF ‘COMPLEXITY’

- The operation of production plants in the Industrial sector is orchestrated to meet the production rhythms of their final customers and deliver promised level of service.
- Their inbound supply chain must respond promptly to changing product specifications and volatility of customer demand.
- It can involve up to 800,000 stock keeping units required to meet customers’ production specification, provided by as many as 6000 suppliers.
- The operating margins in Industrial sector are razor thin. Efficiency is everything.
DELAYS COST TIME AND MONEY

Manufacturers are served daily by hundreds of suppliers located locally and overseas.

The right parts in the right quantities and in right sequence must arrive just in time to the right location.

Delayed shipments can shut down the entire production line.

Line stops cost thousands of Euros per second and break promises to the customer.
WHAT CAN WE DO FOR YOU?

WE CAN HELP YOU!

**REDUCE INVENTORY PIPELINE COSTS**
